BOP Stakeholders Customers

Total Reach 109,977 patients diagnosed

Overview

According to the International Diabetes Federation, the number of people living with diabetes by 2045 is expected to rise to over 700 million¹. For this reason, diabetes and cardiovascular disease are considered a public health concern and a burden for healthcare systems worldwide, with the increasing number of cases and associated healthcare costs.

People already diagnosed and living with diabetes and or cardiovascular disease have to face many challenges. They see their doctors only a few times per year, miss support in between, need to adapt their nutrition, exercise, medication, and also have to take adequate insulin dosages to prevent complications in the future.

Sanofi is a French multinational pharmaceutical company and a leader in providing diabetes treatment and related services. It has recognized the importance of the management of these diseases and the need to develop an integrated approach to improve quality of life and support patients and healthcare systems by offering more than medicine. By combining Sanofi's quality drugs with services, devices and data management, it creates a new way to improve outcomes and patient experiences and act as a health journey partner.

In 2016, Sanofi established a Colombian-based inclusive business using a patient-centric model designed to address local barriers in diabetes care for underserved populations that have limited access to services and or products. Through the partnerships developed with tech companies to involve new technologies such as artificial intelligence, Sanofi helps Health Maintenance Organizations (HMOs)² manage at risk-of-diabetes patients and improve evidence-based treatments for those already diagnosed.

¹ IDF Diabetes Atlas Ninth edition 2019, retrieved from <https://www.idf.org/aboutdiabetes/what-is-diabetes/facts-figures.html>

² In Colombia HMOs are the entities responsible for the affiliation and registration of members and the collection of their contributions, by delegation of the Solidarity and Guarantee Fund. Their basic function is to organize and guarantee, directly or indirectly, the provision of the Health Plan to various members.

700 million

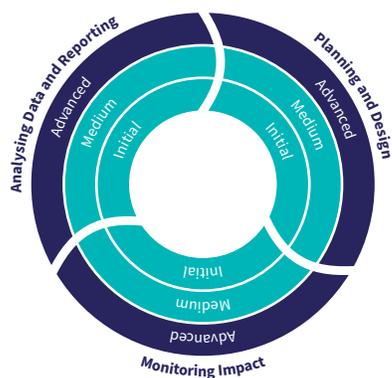

According to the International Diabetes Federation, the number of people living with diabetes by 2045 is expected to rise to over 700 million

Key Stakeholders

Colombian National Law 100 of 1993, established a healthcare system consisted of two parallel plans: a Contributory Health Plan for formal employees and citizens who can afford it and a subsidized health plan for those who cannot afford a contributory plan. These plans are determined by the socio-economic stratum of each person or family. Families whose score classifies them as vulnerable or living in poverty are connected to a subsidized plan administrator. According to the Ministry of Health and Social Protection, in 2019, around **48%** of the Colombian population, approximately 22.8 million people, fell under the subsidized programme.³

Sanofi built an alliance with three HMOs who care for patients in the subsidized regimen. With the assistance of a technologic company, Sanofi was able identify and track patients by analyzing data collected by HMOs with new algorithmic models, help identify possible new patients.

Companies can have an initial, medium or advanced level of impact management capacity

1. Assessing Readiness and Capacity

Sanofi has strong experience in data analysis and management of performance indicators and commercial Key Performance Indicators (KPIs). Additionally, Sanofi has specialized in the effective assessment of costs and utility health initiatives.

The company has conducted several measurement studies over the years and recently designed a more structured impact management approach as part of Business Call to Action's (BCtA) **Impact Champions Programme**. The company measured the effectiveness of their interventions such as workshops and educational campaigns on diabetes prevention in early childhood. The company joined the Impact Champions Programme to organize and assess data to support decision-making processes with concrete results that can assist previous empirical field observations, enabling the initiative to scale up.

At the start of the Impact Champions Programme, Sanofi was found to have an **advanced capacity** for undertaking impact measurement and management. This is because the company's inclusive business initiative is grounded in data analysis of their customers' and patients' needs. It's important to highlight Sanofi's adoption of new information and communication technologies for collecting and using data in daily operations and product design processes.

Sanofi benefits from impact management as it allows them to:

- Build a social reputation by demonstrating social and environmental impact;
- Understand customers' needs;
- Understand market opportunities and risks.

2. Planning For Impact

I. Impact Value Chain

The **Impact Value Chain** is a visual map of how an organization's strategy and operations contribute to its business value and the Sustainable Development Goals (SDGs). The Impact Value Chain allows the organization to understand holistically the effects of its inclusive business activities on different groups of people and the planet. Sanofi tracks its performance on its business activities and results, short and long-term outcomes and goals using the following framework:

In Colombia, more than one million people have been diagnosed with diabetes. Diabetes ranks ninth among causes of deaths and sixth among the list of problems that cause the most disability⁴. Yet, there is a very high proportion of undiagnosed diabetics within the subsidized national healthcare program. Many live at the base of the economic pyramid (BoP) and among those already diagnosed, including insulin-requiring diabetics, there is a high percentage of undertreated or inadequately treated patients due to lack of efficiency, tools and methodologies to find, track and treat patients, leading to elevated rates of avoidable complications. Moreover, there is a lack of structured data systems for better decision-making processes and limited resources to track patients diagnosed with diabetes.

To address these structural issues, Sanofi coordinates with HMOs of subsidized health programmes to promote efficiency in diabetes risk and care management. Sanofi provides the HMOs with breakthrough technology and a methodology that helps the monitoring of patients at a very large scale using artificial

intelligence and big data analysis. The company also trains primary care physicians and health management staff that serve low-income communities in the prevention, diagnosis and treatment of diabetes. Moreover, Sanofi provides an enhanced patient support programme that efficiently helps HMOs track individual patients.

These activities help Sanofi keep diabetes treatment affordable, increase access to insulin for low-income patients, improve basic needs for the treatment of illness, and catalyse local alliances between Sanofi and insurers in the subsidized health programme.

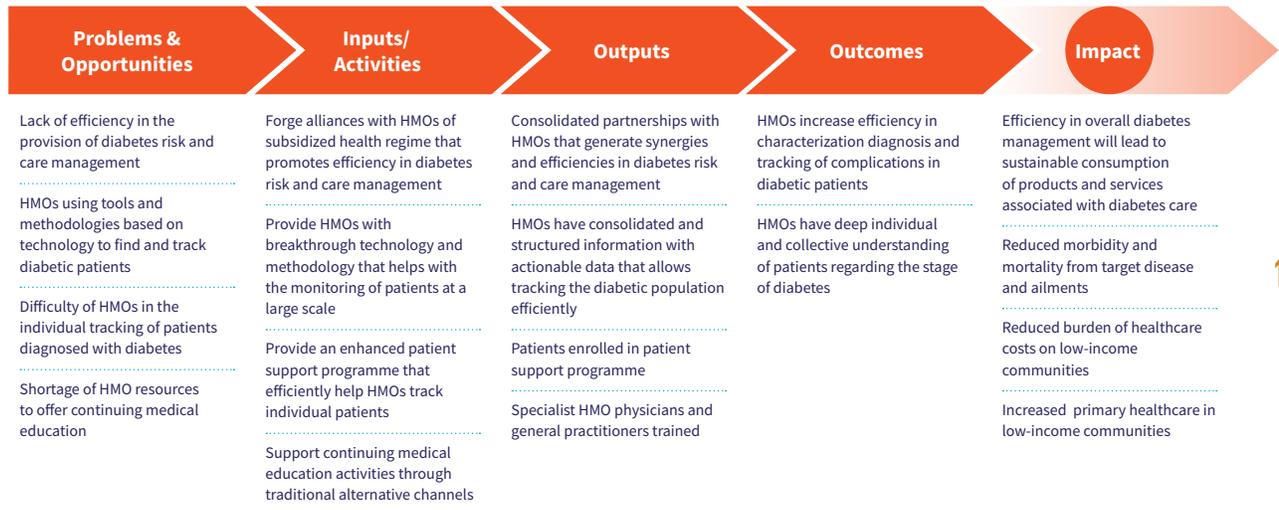

As a result, Sanofi contributes to the HMOs digital transformation enabling better health risk management and treatment. This enables HMOs to increase efficiency and visualize more innovative solutions for the better understanding of patients' needs. This also provides better quality health services with more data and evidence-based treatments.

In the long run, Sanofi's contributions to diabetes management will lead to the sustainable consumption of products and services, allowing people to have a better quality of life. Sanofi aims to increase access to healthcare and reduce the burden of healthcare costs in low-income households and assist Colombia's health system in the prevention of morbidity and mortality with the better health risk and care management of patients.

Sanofi tracks the performance of its inputs, outputs, outcomes and impact goals using the following framework:

Sanofi's Impact Value Chain

Decision-Making Questions	Indicators
<p>Which are the factors that determine the lack of efficiency?</p> <p>How many HMOs belonging to the subsidies regimen have partnered with Sanofi to enhance efficiency in the diabetes risk and care management?</p> <p>To which extent have HMOs increased their skills in the use of methodologies and technologies to increase the efficiency in diabetes risk and care management?</p>	<p>Number of HMOs that implement a traceability system for monitoring medication, health services consumption and health outcomes</p> <p>Number of ally HMOs enhancing efficiency in diabetes risk and care management</p> <p>Number of HMOs adopting a traceability system to monitor health outcomes in diabetes patients</p>
<p>What is the percentage of diagnosed patients with diabetes over the HMO's population prevalence?</p> <p>What is the increase of the diabetes diagnosed rate in the last period per HMO?</p> <p>What is the percentage of controlled patients with diabetes over the total HMOs diagnose patients?</p>	<p>Reported Prevalence and Expected Prevalence of Diabetes</p> <p>Diagnostic gap over prevalence</p> <p>Percentage of total diabetes patients that have controlled diabetes</p>
<p>Does the medium insulin dosage comply with the clinical standard (30-40 UI/Kg/Day/patient)?</p> <p>What is the percentage of patient treated with insulins over total diabetes treated population?</p>	<p>Medium insulin dosage of insulin treated patients</p>

II. Understanding and Describing Impact

The Impact Management Project (IMP) is a forum for building global consensus on how to measure and manage impact. Through a series of consultations and convenings across the world with thousands of practitioners including investors and multilateral institutions, IMP has developed shared fundamentals on how to describe and understand through the lens of the five dimensions of impact. These five dimensions are: WHAT, WHO, HOW MUCH, CONTRIBUTION and RISK.

	tells us what outcomes the enterprise is contributing to and how important the outcomes are to stakeholders.
What	
	tells us which stakeholders are experiencing the outcome and how underserved they were prior to the enterprise's effect.
Who	
	tells us how many stakeholders experienced the outcome, what degree of change they experienced, and for how long they experienced the outcome.
How Much	
	tells us whether an enterprise's and/or investor's efforts resulted in outcomes that were likely better than what would have occurred otherwise.
Contribution	
	tells us the likelihood that impact will be different than expected.
Risk	

Business Call to Action integrates IMP's shared logic in the Impact Lab to help companies plan for impact measurement and management starting with assessing their outcomes considering the five dimensions described above.

Sanofi is contributing to four distinct goals:

(1) Efficiency in overall diabetes management will lead to sustainable consumption of products and services associated with diabetes care,

(2) Reduced morbidity and mortality from target disease and ailments,

(3) Reduced burden of healthcare costs on low-income communities, and

(4) Increased primary healthcare in low-income communities.

Sanofi mapped each goal against the five dimensions of impact to better understand its significance and to better manage and communicate its impact.

Goal 1: Reducing the cost of living of low-income communities

<p>□ What</p> <p><i>What is the importance of your goal to your stakeholders?</i></p> <p>Suppliers and Producers</p> <p>Not Important ————— Important</p>	<p>≡ How Much</p> <p><i>How significant is the impact that occurs in the time period?</i></p> <p>Scale: Did the outcomes happen at scale?</p> <p>Small Scale ————— Large Scale</p> <p>Duration: Do the outcomes last for a long time?</p> <p>Short Term ————— Long Term</p> <p>Depth: Is your organization a deep driver of the outcome for these stakeholders?</p> <p>Marginal Change ————— Deep Change</p>
<p>○ Who</p> <p><i>How underserved are your stakeholders in relation to the SDGs?</i></p> <p>Suppliers and Producers</p> <p>Underserved ————— Well-served</p>	<p>△ Risk</p> <p><i>What is the risk that the impact is not achieved due to external or internal factors?</i></p> <p>Risk</p> <p>Low Risk ————— High Risk</p>
<p>+ Contribution</p> <p><i>How does the impact compare to what is likely to occur anyway?</i></p> <p>Because of our efforts, our stakeholders' access to SDGs is:</p> <p>Likely Worse ————— Same ————— Likely Better</p>	

3. Monitoring Performance

Altogether, three HMOs collected data of 4.5 million affiliates covering 20% of the subsidized national healthcare programme. Sanofi engaged a third-party organization to consolidate, structure and analyse this data to help the company assess performance against its Impact Value Chain described above. Unstructured data from three HMOs, who have affiliates in the states of Nariño, Valle, and Bolivar, was gathered in 2016 to form a baseline against which progress could be tracked annually. Key insights from the data gathered include:

□ What

Sanofi helps HMOs deploy new technologies such as artificial intelligence, making them more efficient in diabetes care management and helping them reduce morbidity and mortality.

- 312 primary care physicians and health management staff that serve low-income communities were trained in prevention, diagnosis and treatment of diabetes.
- All three HMOs stated that Sanofi’s technology solution added value to diabetes care management
- The HMOs agreed on the necessity and relevance of the technological resources in making their work more efficient

○ Who

- According to the Ministry of Health and Social Protection, around **48%** of the Colombian population (approximately 22.8 million people) fell under the subsidized programme in 2019.
- More than one million people have been diagnosed with diabetes. Out of these, there is a high percentage of undertreated or inadequately treated patients, leading to elevated rates of avoidable complications.

≡ How Much

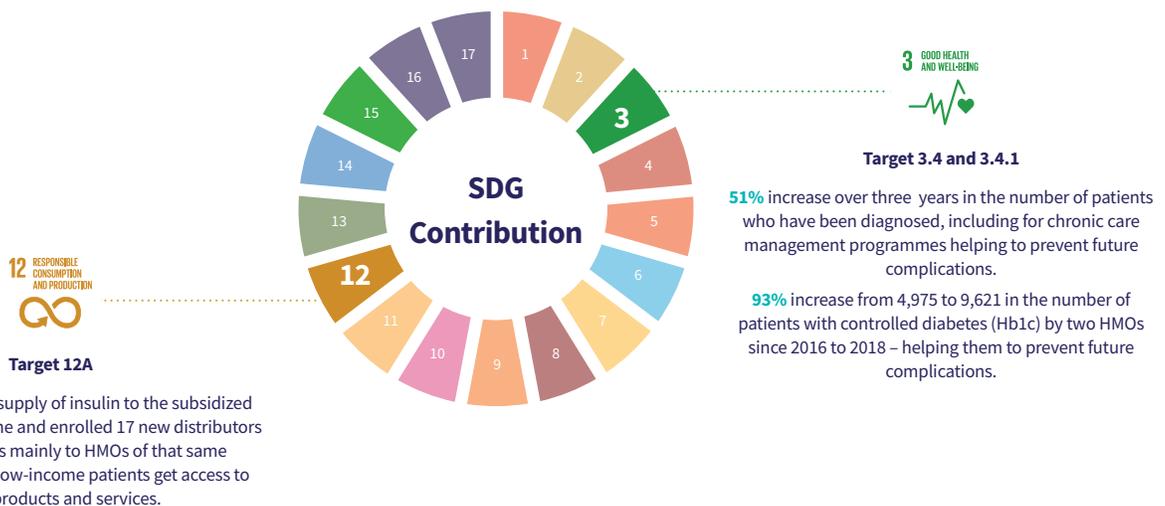

- **51%** increase from 56,350 to 85,224 in the number of newly diagnosed patients by 2 HMO’s since 2016 to 2018.
- **93%** increase from 4,975 to 9,621 in the number of patients with controlled diabetes (Hb1c) by 2 HMO’s since 2016 to 2018.

+ Contribution

- Patients in low-income communities have access to specialized healthcare programme because of t the subsidized programme
- Patients in low-income communities under the subsidized programme have access to better evidence-based diabetes treatment helping them to avoid future complications
- The control rate, obtained from the sum of affiliates divided by the sum of the number of patients controlled, increased by **2.5%** from **8.8%** to 11.3% from 2016 to 2018 for two HMOs.

△ Risk

- Sanofi’s impact is contingent on external factors that might influence the capabilities and response of the HMOs. The company faces a relatively high external risk since external variables such as pandemics can affect care provided to patients diagnosed with diabetes.
- There is some execution risk as the availability to monitor data analysis within the HMOs could be affected due to the need to attend to other priorities such as emergencies and other healthcare crises.
- A low risk of endurance is prevalent as HMOs face limitations on financial and technical resources which can reduce the desired outcomes.

Lessons Learned

While HMOs have vast amounts of data available, for a project like this to be successful it is crucial to structure data in a manner that makes it useable and actionable. Sanofi also learned that engaging project leaders in day-to-day management is key to successful implementation of activities and close monitoring of patients.

Sanofi recognizes the importance of planning social impact using tools such as the Impact Lab to build Sanofi's strategic framework and understand how the company contributes to the SDGs.

Sanofi recognized the importance of stakeholder involvement in proper planning and change management. This involvement allowed them to co-create solutions that benefit the population and stakeholders and allow for improved management and healthcare in diabetes in the long term.

Way Forward / Next Steps

Sanofi's journey from the structuring of an inclusive business model to measuring outputs and impact goals has created a pathway that connects business operations with its desired social outcomes. The Impact Champions Programme was pivotal for Sanofi to integrate impact management in its inclusive business initiative. Sanofi aims to continue with measuring impact to drive its commitment and contributions to the SDGs.

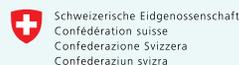

"The mission of our Global General Medicines business unit is to reverse the course of chronic disease epidemics such as diabetes," said Oliver Charmeli, VP Global of General Medicines. Adding to Charmeli's sentiments, Camilo Gonzalez, Public Affairs Manager at Sanofi said, "The approach of involving new technologies and impact measurement and management tools such as ImpactLab help us understand how our daily activities conducted to achieve the aforementioned mission, are also contributing to achieving the SDGs." Going forward, Sanofi wants to improve its approach by integrating technologies that make provision of products and services more efficient and enable scaling up of subsidized healthcare for low-income communities.
